### Hire Dates

A tremendous and diverse group of 6 coworkers are recognized this August for continuous employment at B&P. In order of longevity, they are:

Roland Core, Project Foreman - 23 years, 28th  
Billy Faircloth, Project Foreman - 14 years, 11th  
Carmen Lee, Safety Officer/General Foreman - 14 years, 21st

Juventino Aguirre, Electrician - 9 years, 28th  
David Gonzalez, Electrician - 8 years, 3rd  
Tyler Barnes, Electrician - 2 years, 24th

Each of these workers bring an outstanding work ethic to their roles. Although their responsibilities and number of years experience vary widely, they all are important to Barnes & Powell maintaining the level of success we do.

This week, starting work at Barnes & Powell are Rocky Brooks, Daniel McCullough, and Pedro

Sanchez. We wish each of these new hires all the success in their long careers at B&P.

#### **Upcoming Birthdays:**

Will Dickens - September 3rd

### Project Update

This month has turned up the heat on our project work load even as the temperatures have cooled off. Roland has started the ALSF Cable Replacement at Charlotte-Douglas Airport. Steven, Rocky, and Dennis are working hard on this project while the runway is closed.

While Roland has left Fayetteville, Jimmy, Dennis, and Luis, Sr are handling the load on the taxiways.

Luis, Jr has wrapped up the Wastewater Treatment Plant Improvements in Wanchese. Soon he'll be headed to Georgetown, SC to work on the taxiway lighting rehabilitation. Chip will begin the runway lighting work at nights next week,

with Ole coming in behind him. Right now Ole, Marco, and Pedro are installing the PAPI and circuits for runway 33 in Winston-Salem. Chip also has been working on the emergency 15kV feeder replacement at Ficklen Stadium on the campus East Carolina University, just in time for football season.

Johnnie, George, and Graham are making good progress at the FAA power lab in Wake Forest. Danny is also getting into the act by helping one of our new customers complete some punch list work on their testing facilities.

Once September rolls around we'll be spread all up and down the east coast, as far west as Charlotte and Hillsborough. It'll be even more important to maintain good communications, have equipment and materials on site, and get things installed productively and safely. Everyone's best efforts are expected and no doubt we'll come through again.

### Safety Update

Another month of safe

**CONTINUOUS  
WORK DAYS  
WITHOUT  
INCIDENT: 553  
LAST  
REPORTABLE:  
FEBRUARY 16,  
2010**

**KEEP UP THE GOOD,  
SAFE WORK!**

work activities, and another month closer to a company-wide reward, should we finish the year incident free. Remember PPE, hydration, to be conscientious, and always ask for help when unsure of a task you've been assigned. Test all circuits before operating on them, even when you "know" they are dead. We want you safe, healthy, and returning to work tomorrow!
